Abstracts

The global Digital Full-Chain Logistics Service market size is expected to reach \$ 5111 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

Digital end-to-end logistics services refer to a comprehensive logistics solution that leverages information technology and digital platforms to integrate, optimize, and manage all aspects of the supply chain, from the start point to the last mile of the end user. This includes transportation, warehousing, and distribution, providing real-time visibility, intelligent decision-making, and efficient execution. The goal is to improve logistics efficiency, reduce costs, increase customer satisfaction, and adapt to the ever-changing demands and challenges of the modern business environment.

Digital end-to-end logistics services are a service system centered on information technology and intelligent systems, digitally managing and optimizing the entire logistics process. The upstream of the industry chain includes providers of intelligent warehousing equipment, automated sorting systems, transport vehicles, IoT sensors, and logistics management software, offering underlying hardware and data acquisition solutions. The midstream consists of digital logistics service providers who offer end-to-end services such as order management, warehousing and distribution, transportation scheduling, reverse logistics, and supply chain visualization through logistics cloud platforms, warehouse management systems (WMS), transportation management systems (TMS), and data analytics platforms. The downstream comprises logistics demanders such as e-commerce companies, manufacturers, retailers, pharmaceutical cold chain logistics companies, and fast-moving consumer goods companies. In terms of overall gross profit margin, upstream equipment and software suppliers have higher gross profit margins, generally between 30% and 50%; midstream digital logistics

service providers have moderate gross profit margins, approximately 15% to 25%; and downstream enterprises typically have a gross profit margin of 5% to 15% by integrating logistics service costs, with high-value-added supply chain optimization and intelligent scheduling services further enhancing profit margins.

Digital full-chain logistics services have become an indispensable part of modern business operations. Through the application of digital technology, enterprises can achieve end-to-end visibility of the supply chain, improve the efficiency and accuracy of transportation, warehousing and distribution, thereby reducing costs, reducing inventory backlogs, and improving customer service levels. In addition, digital full-chain logistics services can also bring better risk management capabilities to enterprises to cope with market changes and unexpected challenges, thereby maintaining competitive advantages and promoting business growth.
