As an innovative tool that integrates modern electronic technology with the functions of traditional geological compasses, the digital geological compass has the characteristics of high precision, multi-function and easy operation. Based on the principle of geomagnetic field, it uses multiple built-in sensors (such as magnetic sensors, acceleration sensors, etc.) to measure and display various geological information such as geographic orientation, tilt angle, elevation, air pressure, temperature, time, etc. in real time. This information is usually displayed on a high-definition LCD screen, making the measurement results intuitive and easy to understand.
