The global Digital Inkjet Printing Glass market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Digital inkjet printing on glass is a modern printing technology that can print high-quality full-color images and designs directly onto the surface of glass. This technology uses professional inkjet printers to accurately and accurately print high-resolution images onto glass substrates. Compared to traditional printing methods such as screen printing, digital inkjet printing on glass has several advantages. It allows for greater design flexibility, faster turnaround time, and the ability to print variable data such as serial numbers or barcodes. In addition, digital inkjet printing on glass can obtain high-resolution images with bright colors and clear details, which is very suitable for wide applications such as architectural glass, interior design, and decorative glass.
