According to our (Global Info Research) latest study, the global Digital Knife Cutting Machine market size was valued at USD 755.6 million in 2022 and is forecast to a readjusted size of USD 1142 million by 2029 with a CAGR of 6.1% during review period.

Digital Knife Cutting Machine is an intelligent device that controls the servo system through a motion control system to drive the intelligent cutting equipment body to operate and cut the material to be cut. Unlike die cutting, which uses a physical mold to create a shape, digital cutting uses a blade that follows a computer-programmed path to create the shape. The digital cutting machine consists of a flat table area and a set of arm-mounted cutting, milling and scoring attachments. The arm allows the tool to move left, right, forward and backward. The printed paper is placed on the workbench and the cutter cuts through the paper along a programmed path to cut out the shape.
