Abstracts

The global Digital Knife Cutting Machine market size is expected to reach $ 1142 million by 2029, rising at a market growth of 6.1% CAGR during the forecast period (2023-2029).

Digital Knife Cutting Machine is an intelligent device that controls the servo system through a motion control system to drive the intelligent cutting equipment body to operate and cut the material to be cut. Unlike die cutting, which uses a physical mold to create a shape, digital cutting uses a blade that follows a computer-programmed path to create the shape. The digital cutting machine consists of a flat table area and a set of arm-mounted cutting, milling and scoring attachments. The arm allows the tool to move left, right, forward and backward. The printed paper is placed on the workbench and the cutter cuts through the paper along a programmed path to cut out the shape.

This report studies the global Digital Knife Cutting Machine production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Digital Knife Cutting Machine, and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
