According to our (Global Info Research) latest study, the global Digital Manometer market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Manometers are precision instruments that are used to measure pressure, which is the force exerted by a gas or liquid per unit surface area owing to the effects of the weight of that gas or liquid from gravity. Digital manometers, also known as electronic manometers, do not rely on Hydrostatic Balance of fluids to determine pressure. Instead, they contain a pressure transducer, a device that can convert an observed pressure level into an electrical signal whose characteristic value is proportional to, or a proxy for, the magnitude of the pressure.

The Global Info Research report includes an overview of the development of the Digital Manometer industry chain, the market status of HVAC Systems Maintenance (Absolute Pressure Type, Gauge Pressure Type), Meteorological and Weather Conditions Monitoring (Absolute Pressure Type, Gauge Pressure Type), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Digital Manometer.
