Diabetes mellitus is a chronic disease resulting from an inadequacy of insulin in the body. The condition causes either elevated blood-glucose concentrations, named as hyperglycaemia, or low glucose level known as hypoglycaemia. Monitoring glucose level is expected to prolong life expectancy as it enables the management of hypo- or hyperglycaemia. Self-monitoring method is most commonly used to check blood glucose level.

Although blood remains the most commonly used sample, other biological fluids such as ocular fluid, sweat, breath, interstitial fluid, saliva or urine can also be used as an alternative samples for non-invasive continuous monitoring. As a cure for diabetes is yet to be developed so, managing this condition is the most successful means for its control.
