Digital Microplate Reader is an automated laboratory analytical instrument designed to measure biological, chemical, or biochemical reactions in microplate formats using optical detection technologies. Compared with traditional readers, digital systems provide higher sensitivity, automated data processing, improved reproducibility, and integration with laboratory information systems. The equipment is widely used in clinical diagnostics, pharmaceutical research, biotechnology, immunoassays, molecular biology, and life science laboratories. The product scope includes absorbance, fluorescence, and luminescence microplate readers while excluding simple optical measurement devices.

The industry chain includes upstream suppliers of optical components, detectors, electronic modules, precision mechanical parts, software systems, and laboratory consumables. Midstream covers instrument design, optical system integration, assembly, calibration, software development, and quality testing. Downstream applications include hospitals, pharmaceutical companies, biotechnology companies,

research institutions, and diagnostic laboratories requiring automated high-throughput analysis.
