According to our (Global Info Research) latest study, the global Digital Microwave System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Digital microwave system equipment is used in various communication applications like cellular, radio telecommunication, broadband, satellite, radar, and navigation. Digital microwave is a wireless communication method that in microwave frequency band uses the Line of sight (LoS) communication to transmit digital information, which includes both point-to-point and point-to-multipoint digital microwaves. Digital microwave solutions meet virtually every conceivable backhaul requirement with gigabit-per-second capabilities, they will continue to evolve to meet ever increasing capacity demands and unprecedented levels of flexibility and cost-efficiency. Digital microwave systems deliver an expanding range of capacity-enhancing technologies, increased spectrum efficiency (across a wider range of frequency bands), support for efficient IP data transmission, and growing levels of optimization and automation. Digital microwave systems serve in the areas where it is difficult to lay the optical fibres and support full packet communications for long distances.

Digital microwave system market is mainly driven by the rise in adaptation of 4G and beyond mobile wireless service. Increased demand from customers for better quality in data transmission and reduced revenue from voice calls helps the digital microwave system market to grow in the near future. Deployment of digital microwave system which helps in the deployment of wireless communication costs less when compared to the optical fibre deployment so most of the mobile network operators are interested in the deployment of the Digital microwave system. Deployment of digital microwave

system helps the mobile network operators to execute faster go-to-market strategies. Digital microwave system is compact in size and easy to deploy.
