Abstracts

The global Digital Mining Transformation market size is expected to reach \$ 1578 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

To address the problems of low production efficiency, significant safety hazards, serious resource waste, significant environmental impact, and data silos leading to delayed decision-making in traditional mining, digital mining transformation has emerged. Since the digital technology revolution in the early 21st century, digital mining transformation has achieved leapfrog development in the mining industry and is now widely used in open-pit mining, underground mining operations, ore dressing plant optimization, tailings dam management, mine safety monitoring, and comprehensive resource utilization.

Digital mining transformation is an inevitable path for the mining industry to achieve high-quality development. The market size continues to expand, and technological iteration is accelerating. The industry needs to break through technological bottlenecks, strengthen intelligent and green capabilities, and seize policy dividends and market demands to promote a paradigm shift of 'data-driven + process know-how-driven'. By leveraging technology to enhance production efficiency and safety, optimize resource allocation and cost structure, and expand application scenarios and business models, digital mining transformation will help the mining industry develop towards greater efficiency, environmental friendliness, and intelligence. Ultimately, it will achieve a transformation and upgrade from 'resource extraction' to 'data and value mining,' becoming a core engine for sustainable development in the global mining industry.
