According to our (Global Info Research) latest study, the global Digital Mobile Radio (DMR) Repeaters market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A Digital Mobile Radio (DMR) repeater is a type of radio system that allows for two-way communication between two or more DMR radios over a greater distance than would be possible with a single DMR radio. The repeater receives the signal from the transmitting radio, amplifies it, and retransmits it at a higher power and/or a different frequency to extend the range of the communication. DMR is a digital radio technology that uses Time-Division Multiple Access (TDMA) to allow two simultaneous conversations on the same frequency, effectively doubling the capacity of a given channel compared to analog systems. This makes DMR repeaters more efficient than analog repeaters, as they can handle more traffic in the same amount of time.
