According to our (Global Info Research) latest study, the global Digital Mortgage Software market size was valued at USD 2777 million in 2023 and is forecast to a readjusted size of USD 7885.3 million by 2030 with a CAGR of 16.1% during review period.

In the past, the definition of a digital mortgage varied considerably across the industry. Today, most companies realize that it's not just about having an online application on Web, nor is it simply offering an e-closing. Although automating the borrower application and the closing process is part of the digital mortgage experience, we believe the definition needs to be expanded to include the automation of every step throughout the entire loan process.

We define a digital mortgage as a holistic experience for the borrower, starting with targeted marketing and lead generation to the initial application to processing to underwriting to closing and beyond with postclose audits and marketing.
