According to our (Global Info Research) latest study, the global Digital Oilfield Solutions market size was valued at USD 2522 million in 2023 and is forecast to a readjusted size of USD 3847.7 million by 2030 with a CAGR of 6.2% during review period.

With crude oil & gas being a valued global commodity, the related exploration, refining, internal transfer of base feedstock and intermediate distillates as well as the final derived product involve a high degree of supervision and monitoring of the mentioned operations in oilfields and associated refinery units. Oilfields have three integral operations viz. upstream, midstream and downstream, which require continuous monitoring and supervision. The chief objectives of supervision and monitoring are optimizing product output rate, scrutinizing each level of start-to-finish project, eradicating any anomalies and errors from the mandated norms, avoiding any oil/fuel spills and losses incurred during explorations, internal transfer of intermediates and monitoring inventory levels. Another crucial aspect of digital oilfield solutions is to arrest any counterfeiting or theft that might occur during midstream and downstream operations.
