Abstracts

According to our (Global Info Research) latest study, the global Digital Pathology Software market size was valued at US$ 424 million in 2025 and is forecast to a readjusted size of US$ 816 million by 2032 with a CAGR of 9.8% during review period.

Digital pathology software is a technology platform that allows the management, analysis, and interpretation of pathology information through digitized images of tissue samples. This software enables pathologists to view high-resolution digital slides on a computer screen rather than using traditional microscopes. It offers tools for image analysis, annotation, and sharing, facilitating remote consultations and second opinions. Additionally, digital pathology software often includes features for workflow management, integrating with laboratory information systems (LIS) to streamline case management and reporting. By enhancing diagnostic accuracy, efficiency, and collaboration, digital pathology software plays a crucial role in modernizing pathology practices and improving patient care.

Growth in the digital pathology software market is primarily driven by factors such as the digital transformation of hospital pathology departments, shortages of pathologists, rising demand for remote consultations, and the maturing of AI-assisted diagnostic technologies. As whole-slide imaging (WSI) becomes increasingly widespread, healthcare institutions are turning to software solutions for image management, case distribution, digital slide review, remote collaboration, and long-term archiving to enhance diagnostic efficiency and enable cross-facility resource sharing. Meanwhile, the requirements of precision oncology, companion diagnostics, clinical trials, and drug development—specifically regarding quantitative tissue image analysis, digital biomarkers, and standardized slide review—are fueling the accelerated adoption of AI-

based image analysis and computational pathology platforms. Furthermore, advancements in cloud computing, pathology DICOM standards, open interfaces, and multi-vendor scanner compatibility have facilitated the integration of digital pathology software with LIS, PACS, electronic medical records (EMR), and third-party AI algorithms, thereby expanding its application across hospitals, independent laboratories, pharmaceutical companies, CROs, and research institutions.
