Abstracts

The global Digital PCOS Management market size is expected to reach \$ 1352 million by 2032, rising at a market growth of 8.4% CAGR during the forecast period (2026-2032).

Digital PCOS Management refers to a digital healthcare service system that utilizes artificial intelligence (AI), big data, mobile health applications, wearable devices, telemedicine, and health management platforms to provide long-term, personalized, and comprehensive care for patients with Polycystic Ovary Syndrome (PCOS). Addressing common PCOS-related issues?such as ovulatory dysfunction, hyperandrogenism, insulin resistance, obesity, menstrual irregularities, and fertility needs?the system collects data on menstrual cycles, weight, BMI, blood glucose, insulin, hormone levels, exercise, diet, and sleep. By integrating AI algorithms, it offers risk assessment, lifestyle interventions, nutritional management, exercise guidance, fertility health management, medication support, and remote physician follow-ups. Digital PCOS management enables early disease detection, long-term behavioral improvement, and reduced risk of complications, representing a key application area in the digital management of women's health.

The sector is currently driven by the rising prevalence of PCOS, the growth of FemTech, increasing demand for assisted reproductive services, the need for obesity and metabolic disease management, and the widespread adoption of telemedicine; the industry is evolving from simple menstrual tracking tools into comprehensive women's health management platforms. Key opportunities lie in AI-driven menstrual cycle and ovulation prediction, fertility support management, insulin resistance management, weight and nutrition interventions, mental health support, remote gynecological consultations, and integration with smart wearable devices. Core competitiveness is

defined by capabilities in women's health data analysis, AI predictive modeling, gynecological and endocrinological medical knowledge, long-term user engagement, physician resource integration, and health ecosystem development. Current industry challenges include the complex presentation of PCOS symptoms, lengthy diagnostic processes, poor long-term patient adherence, limited frequency of hormone and metabolic data collection, fragmented medical data, difficulties in formulating personalized treatment plans, and a lack of medical standardization in online services. Solutions involve establishing multidimensional health data platforms, introducing AI-assisted risk identification, enabling continuous monitoring through menstrual tracking, smart devices, and home testing, creating comprehensive intervention plans that combine nutrition, exercise, medication, and fertility management, and strengthening the integration of online and offline medical services. Overall, digital PCOS management is evolving toward a long-term management model characterized by 'women's health data + AI prediction + lifestyle intervention + medical collaboration.'

This report studies the global Digital PCOS Management demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Digital PCOS Management, and provides market size (US\$ million) and Year-over-Year (YoY) growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Digital PCOS Management that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Digital PCOS Management total market, 2021-2032, (USD Million)

Global Digital PCOS Management total market by region & country, CAGR, 2021-2032, (USD Million)
