Abstracts

Advanced dPCR (Digital PCR) technology provides higher accuracy and reproducibility than traditional PCR technology in the amplification and analysis of nucleic acids. The dPCR technology is an innovative PCR that allows amplification and directs quantification of nucleic acids such as DNA, RNA, cDNA, and methylated DNA with high precision. The dPCR technology is not dependent on the number of amplification cycles to quantify the initial sample amount and provides absolute quantification of nucleic acids. dPCR can analyze a small amount of sample and provide higher accuracy, precision, and efficiency than the conventional PCR technology.

Scope of the Report:

This report focuses on the Digital PCR (dPCR) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. One of the latest trends gaining traction in this market is the emergence of PCR solutions in the biomedical sector. The biomedical sector has increasingly adopted and applied PCR solutions such as dPCR due to the advantages and benefits regarding their features. dPCR is widely used for pathogen detection and microbiome analysis that require the detection and quantitation of low-abundance microorganisms in complex backgrounds. Moreover, the rapid growth of the biomedical sector in APAC is likely to boost the adoption of PCR solutions as they find high applicability in this field. This, in turn, will augment growth in the global dPCR market in the coming years.

The worldwide market for Digital PCR (dPCR) is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in
