## Abstracts

According to our (Global Info Research) latest study, the global Digital Pest Control market size was valued at US\$ 2058 million in 2025 and is forecast to a readjusted size of US\$ 3490 million by 2032 with a CAGR of 7.8% during review period.

Digital Pest Control refers to the integration of Internet of Things (IoT), data analytics, and sensor technology into traditional integrated pest management (IPM). Unlike conventional methods that rely on periodic manual inspections, digital systems utilize smart traps, motion-sensing cameras, and environmental sensors to provide 24/7 real-time monitoring. When a pest is detected, the system immediately alerts technicians via cloud-based platforms. The primary objective is to transition from a reactive "catch-and-kill" approach to a proactive, data-driven strategy that identifies infestation patterns and prevents large-scale outbreaks through precision intervention.

In 2025, global Digital Pest Control market size reached approximately 2 billion and gross margin 45%.
