The global Digital Platform for Medical market size is expected to reach \$ 4426 million by 2032, rising at a market growth of 17.6% CAGR during the forecast period (2026-2032).

A healthcare digital platform refers to a comprehensive solution that utilizes information technology and digital tools to provide healthcare institutions, doctors, and patients with improved efficiency, quality, and accessibility of healthcare services. These platforms integrate functions such as electronic medical records, clinical decision support, health information exchange, remote monitoring, and medical image analysis. Through cloud computing and data analytics, they achieve the integration, secure sharing, and real-time access of medical data, thereby supporting comprehensive healthcare management and personalized patient care.

A healthcare digital platform is a comprehensive information platform that utilizes cloud computing, big data, artificial intelligence, and the Internet of Things (IoT) technologies to digitally manage and integrate data from healthcare institutions, pharmaceutical companies, and healthcare service processes. Its upstream industry chain mainly includes IT infrastructure providers (servers, storage devices, network equipment), cloud computing service providers, data acquisition equipment manufacturers, and providers of healthcare information technology software development tools. The midstream consists of healthcare digital platform service providers who offer digital solutions to healthcare institutions and pharmaceutical companies by developing medical data platforms, hospital management systems (HIS), electronic medical record systems (EMR), pharmaceutical supply chain management systems, and medical data analysis platforms. Downstream application areas mainly include hospitals and medical institutions, pharmaceutical manufacturers, pharmaceutical distributors, medical

insurance institutions, and public health management departments. Overall, the industry is centered on software platforms and technical services, and has high added value. The average gross profit margin of the industry is usually between 45% and 65%, while the gross profit margin of platform companies operating in the SaaS model can reach 50% to 70%.

Digital platforms for the healthcare industry play a key role in the current healthcare environment, providing unprecedented added value to healthcare services by integrating advanced information technology and data analysis capabilities. These platforms not only improve the operational efficiency of healthcare institutions and the quality of patient care, but also promote the secure sharing and real-time access to medical data, and enhance the scientificity and accuracy of medical decision-making. By improving the level of medical informatization and the popularity of medical services, digital platforms have injected innovative momentum into the global health care system and promoted the healthcare industry to move towards a more intelligent and sustainable development direction.
