## Abstracts

The global Digital Printing Inks market size is expected to reach \$ 2339 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

In 2025, global digital printer ink production reached approximately 51 kilotons, the average price is 32000 usd/ton. Digital printer inks include active ink, acidic ink, disperse ink, UV ink, solvent ink, etc. It has a wide range of applications, such as advertising, imaging, textile printing industry, digital printing industry and other industries.

**Market Concentration and Key Players:**

Internationally, digital printing ink market concentration is relatively high, mainly concentrated in Europe, America and Japan and other developed countries. For example, DuPont and Huntsman and other large manufacturers; from the domestic point of view, digital printing ink still has a lot of room for development.

**Manufacturing Processes and Market Trends:**

The core of digital printing ink manufacturing process lies in the synthesis of base oil and the precise combination of functional additives, and its market development is driven by two trends of green environmental protection and intelligence. When manufacturing, acrylic resin, epoxy resin, etc. are usually used as binders, and then mixed with pigments, additives, etc. Water-based inks use water as the main solvent, UV inks rely on UV irradiation to initiate polymerization to achieve instant curing, functional inks also need to add special materials such as conductive and antibacterial materials. The key to the production process lies in the refinement of raw materials and the precise control of the ratio. The stability, color reproduction and printability of the ink are ensured by high-speed dispersion and grinding.

At present, the digital printing ink market maintains steady growth, and the demand for environmentally friendly products is particularly significant. This growth is mainly due to the tightening of VOCs emission control worldwide and the increasing demand for

personalized and short-run printing in downstream industries. Green is a clear trend, water-based inks, UV inks and other environmental protection categories due to low VOCs content or zero emissions and market share continues to expand, gradually replacing traditional solvent-based inks. Intelligent production is equally important, and the popularity of digital printing technology promotes the introduction of digital systems in ink production and management to improve efficiency. In addition, the application scenarios are constantly expanding, for example, in the field of textile printing, reactive dye digital inks occupy an important position due to color and fastness advantages, and the demand for special functional inks such as touch screen inks and antibacterial inks in the fields of electronics and packaging is also growing rapidly. In the future, the industry will continue to focus on the development and promotion of low-pollution and low-energy technologies, and personalized customization requirements will also promote the application of digital printing inks in small-batch and multi-variety production.
