Abstracts

According to our (Global Info Research) latest study, the global Digital Product Passport Management Platform market size was valued at US\$ 54.12 million in 2025 and is forecast to a readjusted size of US\$ 329 million by 2032 with a CAGR of 29.3% during review period.

The Digital Product Passport Management Platform is a comprehensive digital infrastructure for enterprises, regulatory agencies, and value chain partners to create, maintain, verify, share, and apply critical sustainability and compliance data throughout the product lifecycle.

The growth of the digital product passport management platform market is primarily driven by EU sustainable product regulatory requirements, corporate product data governance needs, and the accelerated development of circular economy models. As products such as batteries, automotive parts, textiles and apparel, electronics, building materials, and industrial equipment increasingly require disclosure of material composition, country of origin, carbon footprint, proportion of recycled materials, durability, repairability, and recycling methods, companies need a unified platform to handle product identity creation, data collection, supplier collaboration, compliance verification, passport issuance, version updates, and access control management. Meanwhile, the complexity of global supply chain layers, the fragmentation of product data, and the information silos between ERP, PLM, MES, and supplier systems have prompted manufacturers to accelerate the construction of digital product passport management platforms that cover the entire product lifecycle. Furthermore, the increasing maturity of QR code, RFID, NFC, cloud computing, blockchain, and artificial intelligence technologies further enhances the platform's data extraction, authenticity

verification, anomaly detection, and batch passport generation capabilities, expanding application scenarios such as product anti-counterfeiting, after-sales repair, second-hand trading, and material recycling, thereby continuously driving global market demand growth.
