Abstracts

According to our (Global Info Research) latest study, the global Digital Sheet-fed Printing Press market size was valued at US\$ 695 million in 2025 and is forecast to a readjusted size of US\$ 997 million by 2032 with a CAGR of 5.3% during review period.

In 2025, global sales of digital sheet-fed printing presses reached 15,000 units, with an average selling price of \$45,000 per unit. A digital sheet-fed printing press is a device that utilizes digital technology to directly print images and text onto individual sheets of paper; capable of rapid, high-quality printing, it is widely employed in short-run printing, customized printing, publishing, advertising, and the packaging industry. Compared to traditional offset presses, digital presses do not require printing plates; instead, they directly process digital files for printing, offering advantages such as flexibility, high efficiency, and short production cycles?making them particularly well-suited for small-batch, diversified printing requirements. Upstream raw materials primarily consist of print heads, toner, photosensitive materials, electronic control systems, paper feeding mechanisms, and machine casings; downstream, the market primarily targets printing service providers, advertising agencies, publishing houses, and packaging enterprises. In 2025, the total global production capacity stood at approximately 18,000 units, with the industry maintaining an average gross profit margin of around 28%. Looking ahead, driven by the growing demand for customized and personalized printing?as well as environmental regulations steering the industry toward pollution-free and energy-efficient practices?digital sheet-fed printing presses are poised to continue evolving toward higher speeds, greater precision, and enhanced intelligence, while demonstrating sustained growth potential in meeting the demands for short-run production and rapid market responsiveness.
