Digital Subtraction Angiography (DSA) X-ray Device is a specialized medical imaging system used to visualize blood vessels by subtracting pre-contrast images from post-contrast images, effectively removing background structures like bones and soft tissues from the final image. This technique provides highly detailed and clear views of the vascular system, making it essential for diagnosing and treating conditions such as aneurysms, arterial blockages, and vascular malformations. DSA devices are commonly used in interventional radiology, cardiology, and neurosurgery, offering real-time imaging guidance for procedures like angioplasty, stent placement, and embolization, while minimizing the patient's exposure to radiation and contrast agents.
