The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A digital tensiometer is an instrument used to measure the surface tension of liquids. It calculates surface tension by measuring changes in the topography of a liquid's surface. Digital tensiometers usually consist of a liquid tank and a measuring head. During the measurement, the measuring head is immersed in the liquid and measures the shape change of the liquid surface, and then converts the data into digital signals and displays them on the instrument screen. Digital surface tensiometers are widely used in chemical, pharmaceutical, textile, food and other industries to measure parameters such as surface tension, liquid surfactant content, and liquid interfacial tension.
