## Abstracts

The global Digital Train Solutions market size is expected to reach \$ 29418 million by 2032, rising at a market growth of 8.5% CAGR during the forecast period (2026-2032).

Digital Train Solutions is an integrated technology solution and service system built on digital technologies such as the Internet of Things (IoT), big data, artificial intelligence, edge computing, 5G/6G, and digital twins, covering the entire lifecycle of rail transit trains. Its core is to break down information silos between train hardware, operation, maintenance, and management, enabling real-time perception of train status, interconnected data, and intelligent optimization of decision-making. Ultimately, this improves the safety, efficiency, and economy of train operation, while enhancing the passenger travel experience and supporting the digital and intelligent transformation of the rail transit industry.

The integration of digital twin technology with the entire lifecycle of trains continues to deepen, shifting from simulation modeling of single stages to the construction of digital twins across the entire 'design-manufacturing-operation-maintenance' chain. This enables real-time synchronization and data interoperability between the physical train entity and its digital model, becoming the core technological foundation of digital train solutions. Simultaneously, the combination of 5G/6G and edge computing further enhances the real-time performance of onboard data processing, supporting the implementation of intelligent applications with high computing power requirements.

Early digital train solutions focused primarily on the digital upgrade of individual onboard devices (such as sensors and surveillance cameras). Currently, they are gradually evolving towards integrated systems at the vehicle-ground-human-network level, breaking down information barriers between different stages and systems to achieve

digital collaboration across all rail transit scenarios. Integrated solutions are becoming the mainstream market demand.
