The global Digital TV Set-Top Boxes market size is expected to reach \$ 16440 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

In 2024, global shipments of digital TV set-top boxes was 240 million units, with an average product price of approximately US\$43.

A Set-Top-Box or set-top unit (STU) (one type also colloquially known as a cable box) is an information appliance device that generally contains a TV-tuner input and displays output to a television set and an external source of signal, turning the source signal into content in a form that can then be displayed on the television screen or other display device. They are used in cable television, satellite television, and over-the-air television systems, as well as other uses.

The digital TV set-top box (STB) market is primarily driven by the global transition from analog to digital broadcasting and the increasing demand for high-definition (HD), ultra-high-definition (UHD), and multimedia content. Consumers' growing expectations for richer and more interactive television experiences, including video-on-demand, interactive program guides, and smart home integration, are fueling the adoption of set-top boxes that support multiple digital signal formats. The rise of Internet TV and IPTV services further reinforces the need for versatile STB devices. Additionally, government initiatives promoting digital broadcast standards, the expansion of broadband infrastructure, and the trend toward upgraded home entertainment systems are contributing to market growth. Overall, the convergence of digitalization, enhanced content demand, and technological integration is driving the expansion of the digital TV set-top box market.

The global key manufacturers of Digital TV Set-Top Boxes include VANTIVA, Apple, Echostar (DISH), Humax, Sagemcom, Samsung, Roku, Skyworth Digital, and Huawei, etc. In 2024, the global top five players had a share approximately 30% in terms of revenue.
