## Abstracts

According to our (Global Info Research) latest study, the global Digital Type Air Micrometer market size was valued at US\$ 22.37 million in 2025 and is forecast to a readjusted size of US\$ 29.86 million by 2032 with a CAGR of 4.3% during review period.

A Digital Type Air Micrometer is a precision measuring instrument used to measure dimensions of objects with very high accuracy, typically in the micrometer (millionths of a meter) range. Unlike traditional micrometers that rely on mechanical mechanisms for measurement, digital air micrometers use air gauging technology. In digital air micrometers, the object being measured is positioned between two sensitive probes. Air pressure is then applied between the probes, causing them to move apart slightly. The amount of air pressure required to maintain a specific distance between the probes is directly related to the dimension being measured. This pressure is converted into an electronic signal that is displayed digitally, providing precise measurements. These instruments are often used in industries where extremely precise measurements are required, such as manufacturing, aerospace, and automotive industries. They offer advantages such as high accuracy, non-contact measurement (which eliminates the risk of damage to delicate surfaces), and the ability to measure irregularly shaped objects.

Global key players of Digital Type Air Micrometer include SKS, DAI-ICHI SOKUHAN WORKS, OJIYA SEIKI, DONG DO EI, Deva, etc. The top five players hold a share about 82%. Europe is the largest market, with a share about 33%, followed by North America and Asia-Pacific, with share 33% and 23%, separately. In terms of product type, Flow is the largest segment, occupied for a share of 71%. In terms of application, Automotive Industry is the largest, which has a share about 37 percent.
