Abstracts

According to our (Global Info Research) latest study, the global Digital Vacuum Pressure Sensor market size was valued at US\$ 5990 million in 2025 and is forecast to a readjusted size of US\$ 9470 million by 2032 with a CAGR of 6.7% during review period.

A Digital Vacuum Pressure Sensor is an electronic sensing device used to measure vacuum or negative pressure levels in a system and convert the pressure signal into a standardized digital output (such as I²C, RS485, IO-Link, or switching signals). It is widely used in automation systems to enable real-time monitoring, closed-loop control, and predictive maintenance in vacuum applications. In 2025, global Digital Vacuum Pressure Sensor production reached approximately 74.63 M units, with an average global market price of around US\$ 78 per unit. Annual production capacity is 82 M Units. Gross Profit Margin: 41%. The digital vacuum pressure sensor industry chain is structured across three main layers: upstream MEMS chip and sensing element manufacturers, midstream sensor module and transmitter integrators, and downstream application system providers. Upstream suppliers such as Bosch, STMicroelectronics, and Infineon provide MEMS pressure die and signal conditioning chips. Midstream manufacturers including WIKA, Honeywell, SMC, and IFM integrate these cores into calibrated digital vacuum sensors with standardized outputs like IO-Link, RS485, or analog-digital hybrid interfaces. Downstream demand is driven by industrial automation, robotics vacuum grippers, semiconductor equipment, packaging machinery, and HVAC systems, where real-time pressure feedback is critical for process stability and energy efficiency. Digital vacuum pressure sensors represent a mature but steadily expanding industrial sensing category rather than a high-growth disruptive segment. Their value is increasingly defined not by standalone sensor performance, but by system integration

capability, connectivity (IO-Link, smart diagnostics), and reliability in automated production environments. The most attractive opportunities are shifting toward smart factories and robotics, where sensors are embedded as part of intelligent vacuum control systems rather than sold as isolated components.
