According to our (Global Info Research) latest study, the global Digital Video Laryngoscope market size was valued at US\$ 852 million in 2025 and is forecast to a readjusted size of US\$ 1389 million by 2032 with a CAGR of 7.3% during review period.

A digital video laryngoscope is an advanced medical device used in airway management, particularly for performing endotracheal intubation. Unlike traditional laryngoscopes, which rely on direct line-of-sight visualization, a digital video laryngoscope uses a camera system to capture and display a clear image of the airway, including the vocal cords, on a monitor. This improves visibility and accuracy during intubation, especially in challenging airway cases.

Digital video laryngoscopes are rapidly gaining popularity in emergency rooms, operating rooms, intensive care units, and pre-hospital settings.

Post-COVID-19, demand for visualization devices for airway management has increased significantly, driving market growth.

Technological trends include high-definition cameras, miniaturized probes, wireless transmission, and integration with electronic medical records systems.

Developed markets are characterized by high-end product and brand concentration, while emerging markets offer significant growth potential.

Disposable or replaceable blade designs are becoming mainstream to meet infection control and operational safety requirements.
