Digital wireless weighing sensor is a new type of electronic weighing sensor that combines traditional strain gauge weighing sensors with modern electronic technology, wireless communication technology and computer software technology to achieve wireless transmission and digital processing. It uses a highly integrated and intelligent processing unit inside, which can pre-process the analog weight signal by analog/digital conversion, and automatically digitize the various performances of the strain gauge weighing sensor, and finally output a digital signal. Digital wireless weighing sensors are widely used in various occasions that require accurate weighing, such as electronic truck scales, electronic track scales, electronic belt scales and other electronic scales. At the same time, they are also widely used in automated production lines, logistics warehousing, food processing and other fields for automated weighing, batch weighing and quality control.

Digital wireless weighing sensors are widely used in industrial automation, logistics and transportation, commercial retail, healthcare, agriculture and other fields. In the industrial field, it is mainly used for material weighing and quality control on the production line; in the logistics field, it is used for cargo weighing, vehicle load detection

and other aspects. With the continuous development of technologies such as microelectronics, nanotechnology and the Internet of Things, digital wireless weighing sensors are developing in the direction of miniaturization, integration and intelligence.
