Digital X-ray systems consist of the same basic parts as analog X-ray systems such as X-ray sensors, amplifiers, image processing computers, and displays. The major difference is the presence of an analog-to-digital converter that converts the analog image to a digital image with the help of detectors inside the system. Digital X-rays can be separated into direct and indirect conversions. The current digital X-ray technology can reduce the exposure of individuals to radiation, improve quality, eliminate cost, and help in the easy processing of images compared to traditional X-ray systems.

Scope of the Report:

This report focuses on the Digital X-ray System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The demand for digital X-ray systems is growing at a significant rate since the procedure forms the basis of diagnosis and also the treatment of various medical conditions. Tele-imaging enables healthcare professionals to perform and interpret medical images from remote locations, where the technology is hard to reach. The tele-imaging technology has undergone significant technological advancements which let the doctor or hospital to share videos and images of ultrasound via the Internet, using an IP camera and remote access software. This technology allows real-time teleradiology expertise in the presence of a junior sonographer or radiologist at the patient center. It helps in reducing inpatient care and will be efficient in handling the shortage of the physician's workforce. Moreover, the introduction of fully automated, versatile, and easy-to-use digital X-ray systems has led to significant expansion of teleradiology and tele-imaging in remote areas, which will drive this market's growth

over the next four years.

The global digital X-ray systems market is oligopoly in nature, where three leading manufacturers namely GE Healthcare, Philips Healthcare, and Siemens Healthcare dominate the market. With the growing demand for digital X-ray systems, these companies are implementing organic and inorganic growth strategies to drive volume growth, revenue growth, and profitability. The market has witnessed the emergence of new products that can be used with reduced radiation doses as compared to conventional systems.

In terms of geography, the Americas is the largest revenue contributor to The global digital X-ray systems market. The increasing burden of chronic diseases and other medical conditions such as injuries and accidents in the Americas will lead to the augmented adoption of digital X-ray systems. It finds extensive applications such as interventional X-ray, mammography, and general radiography. Furthermore, the rise in awareness for the diagnosis of chronic conditions such as breast cancer have increased the demand for the digital X-ray systems in the Americas.

The worldwide market for Digital X-ray System is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
