Digitalization of Power Distribution means that electrical systems can be upgraded using smart equipment and energy and distribution management software to improve energy efficiency and reduce risk. In the digital trend, more and more industries have realized the benefit improvement of production, operation and management through the Internet of Things, and the key equipment of power distribution system, such as circuit breakers and transformers, supports the Internet of Things.

The key players of Global Digitalization of Power Distribution include HITACHI ABB POWER GRIDS, Schneider, Siemens, etc. These top three companies hold a market share about 60%. Europe is the major producing region in the world. In terms of application, the product is most widely used in industrial equipment, followed by the data center.

The power distribution digitalization market has shown a rapid growth trend in recent years. With the continuous development of technologies such as the Internet of Things, big data, and cloud computing, more and more industries have begun to improve the efficiency of production, operation, and management through digital means. As an important part of the power system, the digital upgrade of the power distribution system has also become an inevitable trend.

The main companies in the power distribution digitalization market include well-known domestic and foreign power equipment manufacturers and solution providers. These companies occupy an important position in the market with their advantages in technology, capital, and brand. Power distribution digitalization is widely used in many fields such as industry, construction, data centers, and rail transit. In the industrial field, power distribution digitalization can improve the automation level and production efficiency of production lines; in the construction field, power distribution digitalization can achieve efficient management of building energy and energy conservation and emission reduction; in the data center field, power distribution digitalization can ensure the stable operation of the data center and the reliability of power supply; in the rail transit field, power distribution digitalization can ensure the safety and stability of train operation.

Smart grid and new power system construction:

Smart distribution equipment is an important part of the construction of smart grid and new power system, and is directly related to the operational safety and efficiency of the power system.

The state has issued a series of policies conducive to the healthy development of the smart distribution equipment industry, promoting the construction of smart grid and new power system, thereby driving the market demand for distribution digitization.

Distribution network high-quality development policy:

The 'Distribution Network High-quality Development Action Plan (2024-2027)' issued by the National Energy Administration proposes to accelerate the promotion of a number of distribution network upgrade and transformation projects in weak power supply areas, increase investment in distribution networks in old communities and urban villages, etc.

These policies aim to improve the power supply guarantee level and intelligence level of the distribution network, providing a broad market space for distribution digitization.
