## Abstracts

According to our (Global Info Research) latest study, the global Digitally Compensated Pressure Transmitters market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Digital compensation pressure transmitter is a pressure sensor that uses digital compensation technology to improve the accuracy and stability of pressure measurement. Traditional pressure transmitters may be affected by factors such as temperature and nonlinearity during the measurement process, resulting in errors in measurement results. The digital compensation pressure transmitter can measure and compensate these influencing factors in real time through the built-in digital compensation algorithm and processing circuit, and provide more accurate and reliable pressure measurement results.
