According to our (Global Info Research) latest study, the global Diglycidyl Ether market size was valued at US\$ 9301 million in 2025 and is forecast to a readjusted size of US\$ 13963 million by 2032 with a CAGR of 6.0% during review period.

Diglycidyl ether (DGE) is a class of epoxy compounds containing two reactive glycidyl (epoxy) groups attached to a central backbone (commonly derived from bisphenols, aliphatic diols, or phenolic structures), widely used as key intermediates in epoxy resins, coatings, adhesives, electrical encapsulation, and composite materials due to their excellent crosslinking ability, chemical resistance, and mechanical strength. The supply chain starts upstream with petrochemical feedstocks such as propylene (for epichlorohydrin production) and phenols or alcohols (e.g., bisphenol A, butanediol), which react with epichlorohydrin under alkaline conditions to produce diglycidyl ethers; midstream involves purification, formulation, and blending into epoxy resin systems or curing agent packages by chemical manufacturers; downstream, these materials are supplied to industries including construction (coatings, flooring), electronics (PCB laminates, encapsulants), automotive (composites, adhesives), wind energy (blade resins), and aerospace, with distribution handled through both direct industrial contracts and specialty chemical distributors. In 2025, global Diglycidyl Ether output was about 4 million tons with 5 million tons of capacity, average prices of USD 2,000-3,500 per ton, and gross margins around 21%.
