According to our (Global Info Research) latest study, the global Dilution Refrigerators market size was valued at USD 112.9 million in 2023 and is forecast to a readjusted size of USD 177.7 million by 2030 with a CAGR of 6.7% during review period.

Dilution refrigerators are a common technique for reaching temperatures below 1K, particularly where continuous cooling at these temperatures is required.

Cryogen-free dilution refrigerators use Helium-3 and Helium-4 isotopes for excessive, continuous cooling. They are employed in the cooling of essential computer parts like computer chips, photonics, spintronics, and other condensed matter. This helps in applications like quantum computing, and nuclear research where cooling of the product is essential. Because these refrigerators help in the advancement of other fields, the cryogen free dilution refrigerators market helps in driving the economy forward.

Global key players of Dilution Refrigerators include Bluefors Oy, Oxford Instruments NanoScience, Leiden Cryogenics BV, Air Liquide(Cryoconcept) and FormFactor(JanisULT), etc. Top three players occupy for a share about 36%. Europe is the largest market, with a share about 42%, followed by North America and Asia-Pacific. In terms of product, Base Temperature Below 10mK is the largest segment, with a share over 57%.
