Abstracts

Dimension stone is a natural rock that is cut into various sizes for use in the construction and monument industries. This industry comprises the development of mine sites mining and quarrying of dimension stones. Dimension stone products include blocks of rock such as marble, granite, limestone, sandstone and slate. Subsequent to cutting and polishing these stones are used in construction of buildings and monuments and also as exterior and interior decorative materials of buildings.

Scope of the Report:

This report studies the Dimension Stone Mining market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Dimension Stone Mining market by product type and applications/end industries.

Remote surveying and geological mapping for mines and quarries is increasingly being done using LIDAR and UAV as it offers fast accurate data to plan mining processes. LIDAR which stands for light detection and ranging is a remote sensing method that uses light in the form of a pulsed laser to measure ranges (variable distances). LIDAR is used for surveying the mining area and helps in determining ore body, mining pit volume and pre-strip and spoil surface volumes. UAV which stands for unmanned aerial vehicle or drone is a type of aircraft that operates without a human pilot onboard. The recent improvements in technology have resulted in the development of UAVs for multiple purposes. In mining UAVs are used for aerial photography, remote sensing and searching, monitoring and providing information from hazardous locations.
