## Abstracts

According to our (Global Info Research) latest study, the global Dimethyl Ether (DME) market size was valued at USD 2250.8 million in 2023 and is forecast to a readjusted size of USD 4535.5 million by 2030 with a CAGR of 10.5% during review period.

Dimethyl ether (DME) is a clean energy source and as it generates no sulfur oxide or soot during combustion, its environmental impact is low. Owing to its non-toxicity and easy liquefaction properties, DME is easy to handle and therefore can be used as a domestic-sector fuel (substitute for LPG), transportation fuel (diesel vehicles, fuel cell vehicles), power plant fuel (thermal plants, cogeneration plants, stationary fuel cells), and as a raw material for chemical products. Given the above-described superior properties, if DME were to become widely available in large volumes at a reasonable price, DME could be used as a fuel in a wide variety of fields.

Chemical is an important driver of this industry. Emerging economies, particularly in Asia and Latin America, are experiencing rapid industrialization, urbanization, and population growth. This drives the demand for bulk chemicals across various sectors, including construction, automotive, electronics, agriculture, and consumer goods. The rising middle class in these regions is also contributing to increased consumption of chemical products.
