The surgery typically takes 30 minutes and can be performed under local anesthesia. Dimples tend to accentuate a smile, thus increasing the perception of attractiveness, sociability and facial beauty. The presence of dimples is inherited in an autosomal dominant fashion. with the popularity of cosmetic surgery and celebrities with dimple has been raise the demand for Dimpleplasty treatment over the forecast period. Several techniques had been described for creation of cheek dimples depending on two main principles either to excise soft tissue or to use suturing technique.
