According to our (Global Info Research) latest study, the global Dioctyl Phthalate market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Dioctyl Phthalate (DOP), also referred to as diethylhexyl phthalate (DEHP), is an organic compound with molecular formula $C_{26}H_{44}O_4$. Dioctyl Phthalate, characterized by its high molecular weight, high boiling point and lower vapour pressure, is one of the most widely used general purpose plasticizers. It is synthesized by reaction of phthalic anhydride with an alcohol such as 2-ethyl hexanol.

Phthalates are the most commonly used plasticizers and as such global Dioctyl phthalate market is expected to witness a steady growth in revenue during the forecast period. The primary factors that are likely to drive the growth of Dioctyl phthalate market are the increase in demand from Dioctyl phthalate end use industries. The increasing demand from films and sheets industry, consumer goods, cables and wiring among others are expected to propel the global Dioctyl phthalate market during the forecast period. Moreover, increasing demand from developing regions of the globe especially from the countries in Asia Pacific is expected to further drive the growth of global Dioctyl phthalate market over the forecast period. Also, cost effectiveness of Dioctyl phthalate is another factor that is likely to result in preference for its use as plasticizer. However, the use of Dioctyl phthalate in certain applications such as in those which involve contact with food and others such as in medical devices is witnessing substitution by non phthalate plasticizers, this is expected to act as an impediment to the growth of global Dioctyl phthalate market during the forecast period.
