## Abstracts

The global Diphenyl Chlorophosphate (DPCP) market size is expected to reach \$ 22.66 million by 2032, rising at a market growth of 3.8% CAGR during the forecast period (2026-2032).

Diphenyl chlorophosphate (DPCP) is a colorless to pale yellow, transparent, hygroscopic, viscous liquid. As a highly efficient phosphorylation reagent and organic synthesis intermediate, it is commonly used to prepare phosphate diesters, phosphate esters of polyhedral hydroxyboranes, and other compounds, and has wide applications in pharmaceuticals, pesticides, and polymer synthesis.

The core upstream raw materials are phosphorus oxychloride and phenol. Its production process typically employs a condensation method, and fluctuations in raw material prices directly determine the cost basis of DPCP.

Global sales in 2025 are estimated at around 3,000 tons, with an average market price of approximately \$5,600 per ton. The industry's gross profit margin is in the range of 20%-35%.

Diphenyl chlorophosphate (DPCP) is at a critical juncture in its transformation from a traditional phosphate chemical intermediate to a high-value-added fine chemical precursor. From an application perspective, this product is mainly used as an intermediate in pharmaceuticals, agrochemicals, and industrial flame retardants. The market demand for DPCP aligns closely with global safety and environmental standards, further highlighting its strategic importance. However, while the industry is developing rapidly, it also faces significant obstacles, the most prominent being extremely high safety and environmental barriers and the pressure of cost transmission.

This report studies the global Diphenyl Chlorophosphate (DPCP) production, demand, key manufacturers, and key regions.
