The global DIPMedical Insurance Fee Control Management System market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

In the medical insurance DIP settlement system, each DIP has a corresponding score. This score is calculated based on the historical cost data, treatment difficulty, resource consumption and other factors of the disease. Medical insurance institutions pay fees according to the disease score based on the DIP data provided by the medical institution. This approach aims to incentivize medical institutions to improve treatment efficiency and reduce medical costs while ensuring patient treatment quality and medical safety.

The medical insurance DIP settlement system, the full name of "disease-based payment settlement system", is a medical insurance expense settlement method. This system classifies diseases according to their diagnosis and treatment methods, and each category is called a DIP. Similar to the DRG system, DIP also groups patients with the same or similar clinical characteristics and treatment methods into one category for easier management and payment.
