Abstracts

The global Dipotassium Methanedisulfonate market size is expected to reach $ 7.80 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of Dipotassium Methanedisulfonate was approximately 263 tons, with a mainstream ex-works price of around US$22/kg and gross margins of major producers generally ranging from 30% to 45%.

Dipotassium Methanedisulfonate, also known as methanedisulfonic acid dipotassium salt, CAS No. 6291-65-2, with the molecular formula CH?(SO?K)?, is a potassium salt fine chemical based on a methanedisulfonic acid structure. The product is typically supplied as a white powder or crystalline powder, featuring good water solubility, strict low-impurity requirements, and strong formulation compatibility. As one of the salt derivatives in the methanedisulfonic acid series, potassium methanedisulfonate is mainly used in electroplating additives and metal surface treatment systems. It can serve as a specialized additive/catalytic component in hard chrome plating formulations to improve bath stability, coating performance, and process adaptability.

Its upstream production mainly involves fine chemical processes such as sulfonation, neutralization, crystallization, and purification, with raw materials related to basic acids and alkalis, sulfonating agents, potassium salts, and relevant auxiliary systems. Downstream applications are primarily concentrated in hard chrome plating, metal surface treatment, electroplating additives, chemical intermediates, and industrial formulation auxiliaries. Among these, hard chrome plating is the core application area, with demand mainly coming from chrome plating additive producers, surface treatment chemical companies, and certain metal processing supporting enterprises.
