Abstracts

According to our (Global Info Research) latest study, the global Dipropylene Glycol Diacrylate (DPGDA) market size was valued at US$ 659 million in 2025 and is forecast to a readjusted size of US$ 872 million by 2032 with a CAGR of 4.1% during review period.

Dipropylene glycol diacrylate (DPGDA) is a bifunctional reactive acrylate monomer. It exhibits moderate viscosity, low volatility, and high reactivity, rapidly polymerizing to form a cross-linked structure under ultraviolet (UV) or electron beam (EB) irradiation.

This product is prepared by the esterification reaction of dipropylene glycol and acrylic acid. DPGDA combines good dilution properties with film hardness, significantly improving the flowability and surface gloss of formulations. It is one of the commonly used reactive diluents in UV-curable coatings, inks, adhesives, and photosensitive resins.Global sales volume in 2024 was approximately 280,000 tons, with an average market price of approximately US$2,200 per ton. The scale of single-line production capacity varies depending on the production process and investment scale of production equipment, typically ranging from 10,000 to 30,000 tons per year, with industry gross profit margins ranging from 10% to 25%.

Dipropylene glycol diacrylate (DPGDA), as one of the most widely used medium-viscosity bifunctional acrylate monomers in UV curing technology, is experiencing continuous growth and structural upgrades. With increasingly stringent global environmental regulations and the widespread adoption of green manufacturing concepts, UV/EB curing technology, with its advantages of "zero VOC emissions, high solids content, and rapid curing," is rapidly replacing traditional solvent-based systems,

leading to a steady increase in demand for DPGDA. Especially in high-value-added fields such as UV inks, wood coatings, electronic adhesives, and 3D printing photosensitive resins, DPGDA, with its excellent flowability, reactivity, and film-forming balance, has become one of the industry's preferred basic monomers.
