Abstracts

The global Di(propylene glycol) Methyl Ether Acetate (DPMA) market size is expected to reach \$ 116 million by 2032, rising at a market growth of 4.0% CAGR during the forecast period (2026-2032).

Di(propylene glycol) Methyl Ether Acetate (DPMA; CAS No.: 88917-22-0) is a highly efficient, low-toxicity, and eco-friendly advanced industrial solvent. It appears as a colorless, transparent liquid with a characteristic ether-like odor. Distinguished by its low viscosity, strong solvency (particularly for both polar and non-polar resins), moderate evaporation rate, and excellent coupling capabilities, it is widely utilized in high-grade coatings, inks, and cleaning agents.

The core upstream raw materials for its production include Dipropylene Glycol Methyl Ether (DPM) and Acetic Acid. Specifically, DPM is synthesized through the condensation of propylene oxide and methanol, while acetic acid is predominantly derived from coal-based or natural gas-based chemical processes. The primary manufacturing method employed is direct esterification; notably, electronic-grade products are subject to stringent purity requirements. Downstream consumption markets are primarily concentrated in high-performance coatings, screen printing inks, and the high-end electronics industry.

In 2025, global sales volume is projected to reach approximately 40,000 tons, with an average selling price of around \$2,154 per ton. The industry's gross margin ranges between 15% and 30%.
