According to our (Global Info Research) latest study, the global Di(propylene glycol) Methyl Ether Acetate (DPMA) market size was valued at US\$ 88.65 million in 2025 and is forecast to a readjusted size of US\$ 116 million by 2032 with a CAGR of 4.0% during review period.

Di(propylene glycol) Methyl Ether Acetate (DPMA; CAS No.: 88917-22-0) is a highly efficient, low-toxicity, and eco-friendly advanced industrial solvent. It appears as a colorless, transparent liquid with a characteristic ether-like odor. Distinguished by its low viscosity, strong solvency (particularly for both polar and non-polar resins), moderate evaporation rate, and excellent coupling capabilities, it is widely utilized in high-grade coatings, inks, and cleaning agents.

The core upstream raw materials for its production include Dipropylene Glycol Methyl Ether (DPM) and Acetic Acid. Specifically, DPM is synthesized through the condensation of propylene oxide and methanol, while acetic acid is predominantly derived from coal-based or natural gas-based chemical processes. The primary manufacturing method employed is direct esterification; notably, electronic-grade products are subject to stringent purity requirements. Downstream consumption markets are primarily concentrated in high-performance coatings, screen printing inks, and the high-end electronics industry.

In 2025, global sales volume is projected to reach approximately 40,000 tons, with an average selling price of around \$2,154 per ton. The industry's gross margin ranges between 15% and 30%.
