## Abstracts

The global Direct Acting Water Solenoid Valve market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The direct acting water solenoid valve means that the electromagnetic force directly acts on the valve core system. The action function of the solenoid valve depends entirely on the electromagnetic force and the return spring, and is not affected by factors such as the pressure difference of the medium. It can be started at zero pressure. Due to the large flow rate, the diaphragm can be made of special materials for hot water fluid.
