Direct Compressible Dextrose refers to a specially processed form of dextrose, a simple sugar derived from starch, that is designed for use in direct compression tablet manufacturing. This form of dextrose is engineered to have properties like good flowability, compressibility, and uniform particle size, making it ideal for tablet formulation without the need for additional granulation steps. It is commonly used as a filler or binder in pharmaceuticals, nutraceuticals, and confectionery, where its sweetness and rapid solubility enhance the product's functionality and palatability.
