Abstracts

According to our (Global Info Research) latest study, the global Direct Cooling Refrigerator market size was valued at US\$ 40470 million in 2024 and is forecast to a readjusted size of USD 55030 million by 2031 with a CAGR of 4.6% during review period.

Direct Cooling Refrigerator refers refrigerator that uses a natural cooling process to lower the temperature inside the fridge. In this system, the cooling coils are placed directly inside the refrigerator compartment, and cold air circulates by natural convection. The air is cooled as it passes over the evaporator coils, which are typically located at the back or bottom of the unit. Unlike Frost-Free Refrigerators, which use fans to circulate cool air evenly, a Direct Cooling Refrigerator relies on passive air circulation.
