Abstracts

According to our (Global Info Research) latest study, the global Direct Detection Device (DDD) Camera market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The two most important technologies in electron microscopy (EM) are charge-coupled devices (CCD, charge-coupled devices) and monolithic active pixel sensors fabricated using standard complementary metal oxide semiconductor (CMOS, complementary metal oxide semiconductor) technology (MAPS, monolithic active pixel sensors). Direct electron detectors have played a key role in the recent growth in the capabilities of single-particle cryo-electron microscopy (cryoEM). Direct detector detectors produce images from 300 keV electrons that are much better than those obtained with film.
