Abstracts

The global Direct Detection Device (DDD) Camera market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The two most important technologies in electron microscopy (EM) are charge-coupled devices (CCD, charge-coupled devices) and monolithic active pixel sensors fabricated using standard complementary metal oxide semiconductor (CMOS, complementary metal oxide semiconductor) technology (MAPS, monolithic active pixel sensors). Direct electron detectors have played a key role in the recent growth in the capabilities of single-particle cryo-electron microscopy (cryoEM). Direct detector detectors produce images from 300 keV electrons that are much better than those obtained with film.

This report studies the global Direct Detection Device (DDD) Camera production, demand, key manufacturers, and key regions.
