Direct ionization mass spectrometer is an analytical instrument that directly ionizes the molecules in the sample, converts them into charged ions, and then separates and detects these ions through mass spectrometry. It does not require complex sample preparation and can quickly analyze the composition of solid, liquid or gas samples. Direct ionization mass spectrometers are widely used in environmental monitoring, food safety, drug development and chemical analysis. They have the characteristics of high sensitivity and rapid response, and can identify trace components in complex samples.
